

Slugs and Snails

twinkl

Slugs and Snails

- Slugs and snails leave slime behind them as they travel.
- The slime protects them from the rough ground.

Slugs and Snails

- Snails and slugs are mainly nocturnal.
- This means that they like to come out at night or very early in the morning.
- This is because the sunlight can dry out their bodies.

Snails

- Snails have a shell.
- The shell helps to protect them.
- When the snail feels threatened, it will hide inside its shell.

Slugs and Snails

- Slugs and snails like to live in dark, damp places.
- They often come out when it rains.

Slugs and Snails

- Slugs and snails have four tentacles on their head.
- Two of the tentacles are eye-stalks and have their eyes on the end.
- The eye-stalks are also used for smelling.
- The other two tentacles are for feeling and tasting.

Slugs and Snails

- Slugs and snails like to eat leaves.
- Farmers and gardeners don't like snails and slugs as they eat the plants that they are growing!
